

MEMBRANE ATTACHMENT RING

ADDITIONAL SECUREMENT OF MECHANICALLY ATTACHED OR FULLY ADHERED ROOFS

Front

Side

Product Description

The Membrane Attachment Ring provides additional attachment of a mechanically attached or fully adhered roof assembly, limiting movement of the membrane under extreme wind loads. The ring provides wind uplift results independent of the roof assembly, which may enhance the wind uplift performance of some assemblies.

Advantages

- Installs quickly
- Provides a uniform wind uplift on all thermoplastic roof assemblies

Packaging Specs

- Units sold individually

Attachment

The Membrane Attachment Ring is secured over the roof membrane using up to 7 approved fasteners. The U2000 is then positioned over the Membrane Attachment Ring and hot air welded around the inside diameter of the ring and again around the outside perimeter of the U2000 target in accordance with membrane manufacturer instructions.
